Suzy,

The purpose of MW-13 is to provide “monitoring in vicinity of PCBs detected in soil samples SS-157 and SS-158.” Based on the attached figure with the new proposed location, it is not clear how this location will monitor the PCBs in the targeted soil area.

It may be more advantageous to revisit the original proposed location to determine if there is another location in the vicinity that allows for PCB monitoring. It is recommend that the area is revisited to determine a more suitable location, if possible.

Regards,
Tanya

Attached is a figure showing the proposed location. The condition at the original location (shown in grey) was previously dry enough for well installation but is currently under 6 to 12 inches of standing water. The field crew and CDM representative had to move approximately 150 feet west, into the landfill, in order to find the nearest dry location.

Hi Suzy,

Can you provide some additional detail of the proposed new location for MW-13? Where are you proposing to move the MW from the location identified in FCR-06? This information will be helpful to determine if a FCR is needed.

Thanks,
Tanya

Subject: RE: Field Change Request Revision

Tanya,

I spoke with the field crew this evening and have been informed that two monitoring well locations (MW-13 and MW-14) previously adjusted in FCR-06 (approved on April 27, 2015) are now located in standing water. The crew identified alternative locations for these two wells. The CDM representative was present during these evaluations.

Would you like to see the revised locations in a third revision to FCR-06 or would you prefer a new field change request for the relocation of these wells?

Thanks,
Suzy
